First Stage Regulators

Model 988HP

Inlet Pressure: 25-250 PSIG

Gas Type: Propane

Setting Point: Inlet Pressure: 100 PSIG, 140,000 BTU

Outlet Pressure: 8-12 PSIG

The first stage regulator is a regulator reducing the inlet pressure, coming from the withdrawal cylinder, to a medium level suitable to feed a second stage regulator consequently.

Second Stage Regulators

Model 998LP

Inlet Pressure: 5-15 PSIG

Gas Type: Propane

Setting Point: Inlet Pressure: 10 PSIG, 140,000 BTU

Outlet Pressure: 11" WC

The second stage regulator is a regulator reducing the pressure coming from a first stage regulator directly to the inlet pressure of the user appliance or to a medium pressure value in case of installations with Pressure Line Regulators.

Twin Stage Regulators North America

Model 998TW

Inlet Pressure: 25-250 PSIG

Gas Type: Propane

Setting Point: Inlet Pressure: 10 PSIG, 140,000 BTU

Outlet Pressure: 11" WC

The twin stage regulator is a regulator consisting of two regulation levels, which regulates the inlet pressure, coming from the withdrawal cylinder or tank directly to the inlet pressure of the user appliance.
